

REVIEW 2

1. Project Structure:

```
job-portal/
├── src/main/java/com/jobportal/
│   ├── controller/
│   ├── service/
│   ├── repository/
│   ├── model/
│   └── JobPortalApplication.java
├── src/main/resources/
│   ├── templates/
│   └── application.properties
```

2. application.properties :

```
spring.datasource.url=jdbc:mysql://localhost:8080/jobportal
spring.datasource.username=root
spring.datasource.password=
```

```
spring.jpa.hibernate.ddl-auto=update
spring.jpa.show-sql=true
```

```
spring.thymeleaf.cache=false
```

3. Entity Classes:

User.java

```
package com.jobportal.model;
```

```
import jakarta.persistence.*;
```

```
@Entity
```

```
public class User {
```

```
    @Id
```

```
    @GeneratedValue(strategy = GenerationType.IDENTITY)
```

```
    private Long id;
```

```
    private String name;
```

```
    private String email;
```

```
    private String password;
```

```
    private String role; // ADMIN / USER
```

```
// getters & setters  
}
```

Job.java

```
package com.jobportal.model;  
  
import jakarta.persistence.*;  
  
@Entity  
public class Job {  
    @Id  
    @GeneratedValue(strategy = GenerationType.IDENTITY)  
    private Long id;  
  
    private String title;  
    private String description;  
  
    // getters & setters  
}
```

Application.java

```
package com.jobportal.model;  
  
import jakarta.persistence.*;  
  
@Entity  
public class Application {  
  
    @Id  
    @GeneratedValue(strategy = GenerationType.IDENTITY)  
    private Long id;  
  
    private String applicantEmail;  
    private String status; // PENDING / ACCEPTED / REJECTED  
  
    @ManyToOne  
    private Job job;  
  
    // getters & setters  
}
```

4. Repository Layer:

```
package com.jobportal.repository;

import org.springframework.data.jpa.repository.JpaRepository;
import com.jobportal.model.*;

public interface UserRepository extends JpaRepository<User, Long> {
    User findByEmail(String email);
}

public interface JobRepository extends JpaRepository<Job, Long> {}

public interface ApplicationRepository extends JpaRepository<Application, Long> {}
```

5. Service Layer:

EmailService.java

```
package com.jobportal.service;

import org.springframework.beans.factory.annotation.Autowired;
import org.springframework.mail.SimpleMailMessage;
import org.springframework.mail.javamail.JavaMailSender;
import org.springframework.stereotype.Service;

@Service
public class EmailService {

    @Autowired
    private JavaMailSender mailSender;

    public void sendEmail(String to, String status) {
        SimpleMailMessage msg = new SimpleMailMessage();
        msg.setTo(to);
        msg.setSubject("Job Application Status");
        msg.setText("Your application is " + status);

        mailSender.send(msg);
    }
}
```

6. Controller Layer:

AuthController.java

```
package com.jobportal.controller;

import org.springframework.beans.factory.annotation.Autowired;
```

```
import org.springframework.stereotype.Controller;
import org.springframework.ui.Model;
import org.springframework.web.bind.annotation.*;
```

```
import com.jobportal.model.User;
import com.jobportal.repository.UserRepository;
```

```
@Controller
```

```
public class AuthController {
```

```
    @Autowired
```

```
    UserRepository repo;
```

```
    @GetMapping("/")
```

```
    public String home() {
```

```
        return "login";
```

```
    }
```

```
    @PostMapping("/register")
```

```
    public String register(User user) {
```

```
        repo.save(user);
```

```
        return "login";
```

```
    }
```

```
    @PostMapping("/login")
```

```
    public String login(@RequestParam String email,
```

```
                        @RequestParam String password,
```

```
                        Model model) {
```

```
        User user = repo.findByEmail(email);
```

```
        if (user != null && user.getPassword().equals(password)) {
```

```
            return "dashboard";
```

```
        }
```

```
        model.addAttribute("error", "Invalid Login");
```

```
        return "login";
```

```
    }
```

```
}
```

JobController.java

```
package com.jobportal.controller;
```

```
import org.springframework.beans.factory.annotation.Autowired;
```

```
import org.springframework.stereotype.Controller;
```

```
import org.springframework.ui.Model;
```

```
import org.springframework.web.bind.annotation.*;
```

```
import com.jobportal.model.Job;
```

```
import com.jobportal.repository.JobRepository;
```

```
@Controller
```

```
public class JobController {
```

```
    @Autowired
```

```
    JobRepository repo;
```

```
    @GetMapping("/dashboard")
```

```
    public String dashboard(Model model) {
```

```
        model.addAttribute("jobs", repo.findAll());
```

```
        return "dashboard";
```

```
    }
```

```
    @PostMapping("/addJob")
```

```
    public String addJob(Job job) {
```

```
        repo.save(job);
```

```
        return "redirect:/dashboard";
```

```
    }
```

```
}
```

ApplicationController.java

```
package com.jobportal.controller;
```

```
import org.springframework.beans.factory.annotation.Autowired;
```

```
import org.springframework.stereotype.Controller;
```

```
import org.springframework.web.bind.annotation.*;
```

```
import com.jobportal.model.*;
```

```
import com.jobportal.repository.*;
```

```
import com.jobportal.service.EmailService;
```

```
@Controller
```

```
public class ApplicationController {
```

```
    @Autowired
```

```
    ApplicationRepository appRepo;
```

```
    @Autowired
```

```
    JobRepository jobRepo;
```

```
    @Autowired
```

```
    EmailService emailService;
```

```

@PostMapping("/apply")
public String apply(@RequestParam Long jobId,
                   @RequestParam String email) {

    Application app = new Application();
    app.setApplicantEmail(email);
    app.setStatus("PENDING");
    app.setJob(jobRepo.findById(jobId).get());

    appRepo.save(app);

    return "redirect:/dashboard";
}

@GetMapping("/accept/{id}")
public String accept(@PathVariable Long id) {
    Application app = appRepo.findById(id).get();
    app.setStatus("ACCEPTED");
    appRepo.save(app);

    emailService.sendEmail(app.getApplicantEmail(), "ACCEPTED");

    return "redirect:/dashboard";
}

@GetMapping("/reject/{id}")
public String reject(@PathVariable Long id) {
    Application app = appRepo.findById(id).get();
    app.setStatus("REJECTED");
    appRepo.save(app);

    emailService.sendEmail(app.getApplicantEmail(), "REJECTED");

    return "redirect:/dashboard";
}
}

```

7. Frontend (Thymeleaf) :

login.html

```

<form action="/login" method="post">
    <h2>Login</h2>
    <input type="email" name="email" placeholder="Email">

```

```
<input type="password" name="password" placeholder="Password">
<button>Login</button>
</form>
```

```
<form action="/register" method="post">
  <h2>Register</h2>
  <input name="name" placeholder="Name">
  <input name="email" placeholder="Email">
  <input name="password" placeholder="Password">
  <button>Register</button>
</form>
```

dashboard.html

```
<h2>Jobs</h2>
```

```
<form action="/addJob" method="post">
  <input name="title" placeholder="Job Title">
  <input name="description" placeholder="Description">
  <button>Add Job</button>
</form>
```

```
<table border="1">
<tr>
  <th>Title</th>
  <th>Description</th>
  <th>Apply</th>
</tr>
```

```
<tr th:each="job : ${jobs}">
  <td th:text="${job.title}"></td>
  <td th:text="${job.description}"></td>
  <td>
    <form action="/apply" method="post">
      <input type="hidden" name="jobId" th:value="${job.id}">
      <input name="email" placeholder="Your Email">
      <button>Apply</button>
    </form>
  </td>
</tr>
</table>
```
